How to Read the Institutional Profile Report

The Institutional Profile provides valuable information on your students' academic and campus life experiences--including post-college plans immediately following graduation--for students at your institution and two comparison groups. This report provides information that can be used for student assessment activities, accreditation and self-study reports, campus planning, and policy analysis. Separate profile reports are generated for graduating seniors and all respondents. Graduating seniors are defined as those respondents who indicated that they will have earned a bachelor's degree as of June 2010.

Comp 1 – The first comparison group is based on your institution's type, control, and selectivity.

Comp 2 – The second comparison group is based on your institution's type and control.

CIRP Construct – Items that are included in the measurement of a construct are indicated here.

Mean – The arithmetic mean is computed for each survey item based on the response options. Response options are given numeric values and are listed in descending order (i.e., 4=Essential, 3=Very Important, 2=Somewhat Important, 1=Not Important).

Statistical Significance – Uses t-test to examine the difference between the mean score for your institution and the comparison group. Items with mean differences that are larger than would be expected by chance are noted with one, two, or three stars, which correspond to the three standard levels of significance (*p < .05, **p < .01, and ***p < .001). Statistical significance measures the extent to which a difference is occurring by chance, not the extent to which a difference is important. Large sample sizes (like those in the comparison groups) tend to generate statistical significance even though the magnitude of the difference may be small and not practically significant. In order to provide additional context to statistical significance, effect sizes are provided.

Effect Size – Determines the practical significance of the mean difference between your institution and the comparison group. It is calculated by dividing the mean difference by the standard deviation of the comparison group. Generally, an effect size of .2 is considered small, .5 medium, and .8 large. A positive sign indicates that your institution's mean is greater than the mean of the comparison group; a negative sign indicates your mean is smaller than the mean of the comparison group. Note that a negative effect size is sometimes preferred (e.g., a negative effect size on "Since entering college, how often have you felt unsafe on this campus" suggests fewer students at your institution reported this was the case).

Standard Deviation – Measures the variability around the mean. A small standard deviation indicates that the responses to the item tend to be very close to the mean, whereas a large standard deviation indicates that the responses are spread over a larger range of response options.

How to Read the Longitudinal Profile Report

The CSS was designed as a follow-up survey to the annual CIRP Freshman Survey (TFS). This report allows you to evaluate the academic and personal development of students over their college experience and to assess the impact of institutional programs, policies, and practices on the students' experiences and outcomes. Longitudinal Reports are based on matched pairs for each survey item, using only students who responded to the survey item on both the CIRP Freshman Survey and the CSS.

Comp 1 – The first comparison group is based on your institution's type, control, and selectivity.

Comp 2 – The second comparison group is based on your institution's type and control.

Mean – The arithmetic mean is computed for each survey item based on the response options. Response options are given numeric values and are listed in descending order (i.e., 3=Frequently, 2=Occasionally, 1=Not at all).

Standard Deviation – Measures the variability around the mean. A small standard deviation indicates that the responses to the item tend to be very close to the mean, whereas a large standard deviation indicates that the responses are spread over a larger range of response options.

Statistical Significance – Uses t-test to examine the difference between the mean responses on the CIRP Freshman Survey and the CSS. Items with mean differences that are larger than would be expected by chance are noted with one, two, or three stars, which correspond to the three standard levels of significance (*p < .05, **p < .01, and ***p < .001). Statistical significance measures the extent to which a difference is occurring by chance, not the extent to which a difference is practically important. Large sample sizes (like those produced in comparison groups) tend to generate statistical significance even though the magnitude of the difference may be small and not practically significant. In order to provide additional context to statistical significance, effect sizes are provided.

Effect Size – Determines the practical significance of the mean difference between responses on the CIRP Freshman Survey and the CSS. It is calculated by dividing the mean difference by the pooled standard deviation. Generally, an effect size of .2 is considered small, .5 medium, and .8 large. A positive sign indicates that the CSS mean is greater than the CIRP Freshman Survey mean; a negative sign indicates the CSS mean is smaller than the CIRP Freshman Survey mean. Note that a negative effect size is sometimes preferred (e.g., a negative effect size on "Since entering college, how often have you felt intimidated by your professors" suggests fewer students at your institution reported this was the case as seniors than as freshman).

COLLEGE SENIOR SURVEY STUDENT INFORMATION SHEET

PURPOSE OF THE STUDY

You are asked to complete this survey as part of a national study of higher education conducted by the Higher Education Research Institute (HERI) at the University of California, Los Angeles. One major goal of this research is to determine what happens to students when they attend college. The data gathered are used in studies designed to better understand student learning and development and to help improve the quality of college education. Your decision to participate (or not to participate) will not affect your relationship with your college nor your grades.

PROCEDURES

If you volunteer to participate in this study, we would ask you to complete the attached survey and return it to the designated person at your campus. Most respondents can complete this questionnaire in about 25 minutes, although individual progress will vary by how quickly you move through the questions.

If you volunteer to complete this survey, you may decide not to complete the survey for any reason at any time without consequence of any kind. The Higher Education Research Institute does not offer payment for participation. Your completion and return of the enclosed questionnaire indicate your consent to participate in the study.

POTENTIAL BENEFITS TO SUBJECTS AND/OR SOCIETY

You may have the opportunity to reflect on your prior academic experiences and your expectations for college as you complete the survey, which may enhance self-understanding. Results of your participation also will be directly beneficial to your college or university, and may benefit future generations of college students as well.

POTENTIAL RISKS AND DISCOMFORTS

There could be survey items that you are uncomfortable answering or to which you would simply prefer not to respond. Your participation in this study is strictly voluntary, and you will be under no obligation whatsoever to answer any questions that you are not inclined to answer. You may choose not to answer any specific questions you do not want to answer and still remain in the study.

CONFIDENTIALITY

Please note that your responses will be used for research purposes only and will be strictly confidential. Any information that is obtained in connection with this study and that can be identified with you will remain confidential. All your confidential responses in this questionnaire will be returned to your institution for local statistical analysis, except that we will not include your name, address, or phone number in that information. Further, all colleges receiving your responses are required to certify in advance that the data will only be used for research purposes and will not be used to investigate specific individuals. Your student id# on the form will be returned to your institution in order to facilitate institutional assessment, but again your institution has pledged not to examine individual responses.

IDENTIFICATION OF INVESTIGATORS

If you have any questions or concerns about the research, please contact the Managing Director of HERI, John H. Pryor, at this address:
